

Thank you !

We would like to thank you for your purchase! We'd love to hear your feedback so feel free to send us an email at support@satochip.io to let us know how your experience went.

Quick setup - LTC

Download the latest Electrum LTC Satochip client available on GitHub:
<https://github.com/Toporin/electrum-ltc-satochip/releases>

Plug your card wallet in a card reader and launch the Electrum LTC Satochip client.

For a quick start, follow these steps:

- Choose a name for your wallet file – Next
- “Standard wallet” – Next
- “Use a hardware device” – Next

Follow the Electrum LTC wizard and insert your desired personal PIN code to secure the card. Choose whether you want to use the 2FA application (Android only).

Insert your seed or generate a brand new one. Take care to backup the seed in a safe place. With the PIN code, these are the only information needed to recover your wallet.

Congratulations! Take a beer and chill. You have now a fully functional and highly secured Satochip Litecoin hardware wallet.
