

Thank you !

We would like to thank you for your purchase! We'd love to hear your feedback so feel free to send us an email at support@satochip.io to let us know how your experience went.

Quick setup - BTC

Download the latest Electrum Satochip client available on GitHub:
<https://github.com/Toporin/electrum-satochip/releases>

Plug your card wallet in a card reader or via NFC and launch the Electrum Satochip client.

For a quick start, follow these steps:

- Choose a name for your wallet file – Next
- “Standard wallet” – Next
- “Use a hardware device” – Next

Follow the Electrum wizard and insert your desired personal PIN code to secure the card (*up to 16 chars*).

Insert your seed or generate a brand new one. Take care to backup the seed in a safe place. With the PIN code, these are the only information needed to recover your wallet.

Congratulations! Take a break and chill. You have now a fully functional and highly secured Satochip Bitcoin hardware wallet.
