

Thank you !

We would like to thank you for your purchase! We'd love to hear your feedback so feel free to send us an email at support@satochip.io to let us know how your experience went.

Quick setup - Satodime

Download the latest Satodime-Tool available on GitHub:

<https://github.com/Toporin/Satodime-Tool/releases>

Plug your card wallet in a card reader or via NFC and launch the Satodime-Tool.

For a quick start, follow these steps:

- Click on "Seal Key!" to seal a new keyslot
- Generate a random entropy
- Select your preferred "Asset type"
- Click on "Coin type" to select the blockchain
- Then click on "Seal" to generate a new wallet.

The chip card will generate a pair of keys corresponding to the blockchain you've selected. You can now see the public information such as the wallet address or the balance.

You can load the card by sending some coins/tokens to the provided address.

To redeem the wallet, click on "Unseal key!" and recover the private key. You can import the private key in your favorite software client.
